

ABSTRACT

Disclosed are binding proteins that specifically bind to
an isolated and purified peptide comprising a leucine
positioned two peptide bonds away from a tyrosine-arginine
5 pair. Other binding proteins of the invention include those
that specifically bind to an isolated and purified peptide
with the sequence cysteine-blank-blank-proline-histidine-
blank-blank-blank-cysteine^(SEQ ID NO: 6) or cysteine-blank-proline-
histidine-blank-proline-blank-blank-cysteine.^(SEQ ID NO: 9)
